13. Select the appropriate printer model, then click Device Settings. The tool will extract the current settings from the device.

14. The most commonly customized settings are the Auto Power On/Off settings which are located at the top of the first tab. These settings control if the printer automatically turns on when power is applied and if it turns back off after a specified timer when power is taken away. There are several other more print-specific settings that can be altered using this tool.

15. To restore the printer back to its factory settings, click the maintenance menu and select Factory Reset.
